Notice of opposition shall be filed in a written reasoned statement. It shall not be deemed to have been filed until the opposition fee has been paid (Art. 99(1) European patent convention).

EP 0 278 673 B1

Description

The present invention relates to a novel benzoylurea derivative, its production and an insecticidal and acaricidal composition containing it as an active ingredient.

Hitherto, benzoylurea compounds belonging to a certain kind are known to have an insecticidal activity and an acaricidal activity (US-A-3989842, EP-A2-72438, JP-A-59-27864 and JP-A-60-51163), and of these compounds, there are some which are already on the market like diflubenzuron.

These compounds, however, are insufficient in efficacy or are expensive to manufacture, so that they are not always satisfactory.

In view of this, we have made an extensive study concerning the aniline moiety of the benzoylurea compound, and as a result, have found that a benzoylurea compound derived from a certain kind of 4-anilinoaniline compounds unknown to the literature has excellent properties: It has a very high insecticidal and acaricidal activity against larvae and nymphs, particularly a high lethal activity against the larvae and nymphs of spider mites and a sterilization activity against the female adults of spider mites, and besides it can be produced at a relatively low cost.

The present invention provides a benzoylurea derivative represented by the formula (I) (hereinafter referred to as present compound),

wherein R_1 is a fluorine or hydrogen atom, R_2 is a chlorine or hydrogen atom, R_3 is a fluorine or bromine atom or a lower haloalkyl group, and X and Y , which may be the same as or different from one another, are an oxygen or sulfur atom, its production and an insecticidal and acaricidal composition containing it as an active ingredient.

Some of the present compounds are included within the general formula given in EP-A-0072438, but as is apparent from test examples described later, the present compounds are not only markedly superior particularly in their acaricidal activity as compared with the compounds specifically disclosed in that document and the well-known homologues, but also have a sterilization activity against spider mites. Likewise, some of the present compounds are included within a general formula given in EP-A-0116729, while EP-A-0122449 describes a wide range of benzoylurea compounds having a substituted phenoxy in place of the substituted anilino groups in the above formula 1.

Specific examples of insect pests against which the present compounds are particularly efficacious are as follows: Insects such as larvae of Lepidoptera such as diamond-back moth (*Plutella xylostella*), rice stem borer (*Chilo suppressalis*), rice leaf-roller (*Cnaphalocrocis medinalis*), armyworms and cutworms, etc.; larvae of Diptera such as house mosquitoes (*Culex* spp.) [e.g. *Culex pipiens pallens*], Anopheline mosquitoes (*Anopheles* spp.), Aedes mosquitoes (*Aedes* spp.), chironomid midges, houseflies (*Muscidae*) [e.g. *Musca domestica*], blow flies (*Calliphoridae*), flesh flies (*Sarcophagidae*), tabnid flies (*Tabanidae*), blackflies, etc.; nymphs of Dictyoptera such as German cockroach (*Blattella germanica*), etc.; and larvae of Coleoptera; and mites of the family Tetranychidae such as two-spotted spider mite (*Tetranychus urticae*), carmine spider mite (*Tetranychus cinnabarinus*), Kanzawa spider mite (*Tetranychus kanzawai*), citrus red mite (*Panonychus citri*), European red mite (*Panonychus ulmi*), etc.; Cheyletidae; Tarsonemidae; Acaridae [e.g. *Tyrophagus putrescentiae*]; Pyroglyphidae [e.g. *Dermatophagoides farinae*], etc.

Furthermore, the present compounds are low in toxicity to warm-blooded animals so that they can be orally administered mixed with feeds for animals to domestic animals such as cattle, pigs, horses, sheep, goats, chickens, etc. As a result, the present compounds are excreted from animals as undecomposed, so that the larvae of insect pests living in the excrement of domestic animals [e.g. housefly (*Musca domestica*), false stablefly (*Muscina stabulans*), little housefly (*Fannia canicularis*), blow flies (*Calliphoridae*), flesh flies (*Sarcophagidae*), sepsid flies (*Sepsidae*)], can be exterminated.

In the present compound represented by the formula (I), preferred compounds are those in which R_3 is a fluorine atom or a difluoromethyl group, and more preferred ones include:

N-2,6-difluorobenzoyl-N'-3,5-dichloro-4-[4-(trifluoromethoxy)anilino]phenylurea,

N-2,6-difluorobenzoyl-N'-3,5-dichloro-4-[3-chloro-4-(trifluoromethoxy)anilino]phenylurea,
 N-2,6-difluorobenzoyl-N'-3,5-dichloro-4-[4-(1,1,2,2-tetrafluoroethoxy)anilino]phenylurea,
 N-2,6-difluorobenzoyl-N'-3,5-dichloro-4-[4-(trifluoromethylthio)anilino]phenylurea, etc.
 The present compounds can be produced by the following methods.

Method A:

A method of reacting a benzoylisocyanate or benzoylthiocyanate compound represented by the formula (II),

wherein X is the same as described above,
 with a 4-anilinoaniline compound represented by the formula (III),

wherein R₁, R₂, R₃ and Y are the same as described above.

Method B:

A method of reacting 2,6-difluorobenzamide represented by the formula (IV),

with an isocyanate or isothiocyanate compound represented by the formula (V),

wherein R_1 , R_2 , R_3 , X and Y are the same as described above.

In the foregoing Methods A and B, the reaction is usually carried out in the presence of an inert solvent. The solvent usable includes for example hydrocarbons (e.g. benzene, toluene, xylene, chlorobenzene, carbon tetrachloride, chloroform, methylene chloride, 1,2-dichloroethane, nitromethane), ethers (e.g. diethyl ether, tetrahydrofuran, dioxane), ketones (e.g. acetone, methyl ethyl ketone, methyl isobutyl ketone), polar organic solvents (e.g. dimethyl sulfoxide, dimethylformamide, sulfolane) and mixtures thereof.

In Methods A and B, the reaction can generally be carried out under normal pressure, and the object can be attained usually in from 1 to 50 hours. The amount of the compounds which are a raw material are generally in an equimolar ratio, but one of the compounds may be used in excess.

In Methods A and B, the reaction temperature is not particularly limited, but it is in a range of generally from 0° to 80°C, usually from room temperature to 60°C for Method A, and generally from room temperature to 160°C, usually from 80° to 150°C for Method B.

The present compounds thus obtained can be purified if necessary by means such as column chromatography, recrystallization, etc.

The 4-anilinoaniline compound of the formula (III) used in the method of the present invention can be produced, for example, by reacting a 4-halonitrobenzene derivative represented by the formula (VI),

wherein R_1 is the same as described above, and R_4 is a halogen atom, with an aniline derivative represented by the formula (VII),

wherein R_2 , R_3 and Y are the same as described above, for example in the presence of a base and preferably in an inert solvent and then reducing the resulting 4-anilinoaniline compound.

Further, said 4-anilinoaniline compound can be converted to an isocyanate or isothiocyanate compound represented by the formula (V) by reacting it with phosgene or thiophosgene according to the usual method.

When the present compounds are used as an active ingredient for insecticidal and acaricidal composition, they may be used as they are without adding any other ingredients. Usually, however, they are formulated into emulsifiable concentrates, wettable powders, dusts, granules, flowable formulations, oil sprays, aerosols, etc. by mixing with solid carriers, liquid carriers, gaseous carriers, surface active agents, other auxiliaries for formulation, baits, etc.

In these preparations, the content of the present compound, which is an active ingredient, is from 0.01 to 95% by weight. The solid carrier includes for example fine powders or granules of kaolin clay, attapulgite clay, bentonite, terra alba, pyrophyllite, talc, diatomaceous earth, calcite, corn stalk powder, walnut shell powder, urea, ammonium sulfate, synthetic hydrated silicon dioxide and the like. The liquid carrier includes for example aliphatic hydrocarbons (e.g. kerosene), aromatic hydrocarbons (e.g. benzene, toluene, xylene, methylnaphthalene), halogenated hydrocarbons (e.g. dichloroethane, trichloroethane, carbon tetrachloride), alcohols (e.g. methanol, ethanol, isopropanol, ethylene glycol, cellosolve), ketones (e.g. acetone, methyl ethyl ketone, cyclohexanone, isophorone), ethers (e.g. diethyl ether, dioxane, tetrahydrofuran), esters (e.g. ethyl acetate), nitriles (e.g. acetonitrile, isobutyronitrile), acid amides (e.g. dimethylformamide, dimethylacetamide), dimethyl sulfoxide, vegetable oils (e.g. soybean oil, cotton seed oil) and the like. The gaseous carrier includes for example freon gas, LPG (liquefied petroleum gas), dimethyl ether and the like.

The surface active agent used for emulsification, dispersion, wetting, etc. includes for example anionic surface active agents such as the salt of alkyl sulfates, alkyl(aryl)sulfonates, dialkyl sulfosuccinates, the salt of polyoxyethylene alkylaryl ether phosphoric acid esters, naphthalenesulfonic acid/formalin condensates, etc., and nonionic surface active agents such as polyoxyethylene alkyl ether, polyoxyethylene polyoxypropylene block copolymers, sorbitan fatty acid esters, polyoxyethylene sorbitan fatty acid esters, etc. The auxiliary for formulation such as fixing agents, dispersing agents, etc. includes for example lignosulfonates, alginates, polyvinyl alcohol, gum arabic, molasses, casein, gelatin, CMC (carboxymethyl cellulose), pine oil, agar, etc. The stabilizer includes for example alkyl phosphates [e.g. PAP (isopropyl acid phosphate), TCP (tricresyl phosphate)], vegetable oils, epoxidized oils, the foregoing surface active agents, antioxidants (e.g. BHT, BHA), fatty acid salts (e.g. sodium oleate, calcium stearate), fatty acid esters (e.g. methyl oleate, methyl stearate) and the like.

The preparations thus obtained may be used as they are or diluted with water. Also, they may be used in mixture with other insecticides, acaricides, nematocides, fungicides, herbicides, plant growth regulators, fertilizers, soil improvers, feeds for animals, etc.

When the present compounds are put to practical use as an insecticidal and acaricidal composition, their dosage rate is usually from 1 to 100 g per 10 ares, and their application concentration is from 10 to 500 ppm when emulsifiable concentrates, wettable powders, flowable formulations, etc. are used diluted with water. Dusts, granules, oil sprays, aerosols, etc. are used as they are without dilution.

The present invention will be illustrated in more detail with reference to the following production examples, reference examples, formulation examples and test examples, but it is not limited to these examples.

Production examples of the present compounds will be shown.

Production example 1 Production of the present compound (1) by Method A

One hundred and ninety milligrams of 3,5-dichloro-4-[4-(trifluoromethoxy)anilino]aniline was dissolved in 5 ml of toluene, and to the resulting solution was added dropwise a solution of 103 mg of 2,6-difluorobenzoylisocyanate in 5 ml of toluene with stirring and ice-cooling. After completion of the addition, the reaction solution was stirred overnight at room temperature, and 10 ml of n-hexane was added. The precipitated crystals were filtered off and dried to obtain 200 mg of N-2,6-difluorobenzoyl-N'-3,5-dichloro-4-[4-(trifluoromethoxy)anilino]phenylurea [present compound (1)] as white crystals.

Yield 68%
m.p. 192.2 °C

Production example 2 Production of the present compound (3) by Method B

A mixture of 98 mg of 2,6-difluorobenzamide, 246 mg of 3,5-dichloro-4-[4-(1,1,2,2-tetrafluoroethoxy)anilino]phenylisocyanate and 15 ml of xylene was brought into reaction under reflux for 4 hours. After completion of the reaction, the reaction solution was allowed to cool to room temperature, and 10 ml of n-hexane was added. The precipitated crystals were filtered off and dried to obtain 251 mg of N-2,6-difluorobenzoyl-N'-3,5-dichloro-4-[4-(1,1,2,2-tetrafluoroethoxy)anilino]phenylurea [present compound (3)] as white crystals.

Yield 73%

m.p. 181.6°C

Compounds produced by the same methods as above will be shown in Table 1.

Table 1

Compounds represented by the formula:

(11)	H	H	-CF ₂ H	S	O	154.9
(12)	H	Cl	-CF ₂ H	O	O	180.6

Production examples for the compounds used as a material will be shown in reference examples.

Reference example 1

One gram of 3,5-dichloro-4-iodonitrobenzene and 0.56 g of 4-(trifluoromethoxy)aniline were dissolved in 7 ml of dimethylformamide, and 0.26 g of sodium hydride (as 60% oil suspension) was added in small portions with stirring and ice-cooling. After completion of the addition, stirring was continued overnight at room temperature. The reaction mixture was diluted with 50 ml of diethyl ether, washed successively with 1N hydrochloric acid and water, dried and concentrated. The resulting crude oily product was purified by thin layer chromatography on silica gel to obtain an oily product. This oily product was dissolved in 7 ml of ethyl acetate, and after adding a catalytic amount of platinum (IV) oxide, stirred at room temperature for 2 hours under hydrogen atmosphere. After removing platinum (IV) oxide from the reaction mixture by

filtration, the reaction mixture was concentrated. The resulting crude oily product was purified by thin layer chromatography on silica gel to obtain 0.19 g of 3,5-dichloro-4-[4-(trifluoromethoxy)anilino]aniline as white crystals.

Yield 18%

m.p. 132.2 °C

¹H-NMR (CDCl₃):

6.7 (2H, s)
7.0 (2H, br, d, J=9.0Hz)

Reference example 2

One gram of 3,4,5-trichloronitrobenzene and 1.05 g of 4-(bromodifluoromethoxy)aniline were dissolved in 7 ml of dimethyl sulfoxide, and 0.36 g of sodium hydride (as 60% oil suspension) was added in small portions with stirring and ice-cooling. After completion of the addition, stirring was continued overnight at room temperature. The reaction mixture was diluted with 50 ml of diethyl ether, washed successively with 1N hydrochloric acid and water, dried and concentrated. The resulting crude oily product was purified by thin layer chromatography on silica gel to obtain 0.76 g of an oily product. Separately from this, a reaction solution was prepared by refluxing 1.0 g of electrolytic iron and 5 ml of 10% acetic acid for 1 hour in a flask. The aforementioned oily product was dissolved in a mixture of 7 ml of ethyl acetate and 7 ml of acetic acid, and the resulting solution was added dropwise under reflux to the aforementioned reaction solution. After 10 minutes, the reaction solution was poured into an aqueous sodium hydrogencarbonate solution containing ice pieces and extracted with two 70-ml portions of ethyl acetate. The extracts were combined, dried and concentrated to obtain a crude oily product. This product was purified by thin layer chromatography on silica gel to obtain 0.40 g of 3,5-dichloro-4-[4-(bromodifluoromethoxy)anilino]aniline as white crystals.

Yield 23%

m.p. 99.0 °C

6.5 (2H, d, J=9.0Hz)
6.8 (1H, d, J=9.0Hz)
7.0 (2H, d, J=9.0Hz)

Formulation examples will be shown. In the examples, the present compounds are shown by Compound No. in Table 1 and parts are by weight.

Formulation example 1

Ten parts of each of the present compounds (1) to (12), 14 parts of polyoxyethylene styrylphenyl ether, 6 parts of calcium dodecylbenzenesulfonate, 35 parts of xylene and 35 parts of dimethylformamide are well mixed to obtain an emulsifiable concentrate of each compound.

Formulation example 2

Twenty parts of each of the present compounds (1) to (12), 10 parts of fenitrothion, 3 parts of calcium lignosulfonate, 2 parts of sodium lauryl sulfate and 65 parts of synthetic hydrated silicon dioxide are well pulverized and mixed to obtain a wettable powder of each compound.

Formulation example 3

One part of each of the present compounds (1) to (12), 2 parts of carbaryl, 87 parts of kaolin clay and 10 parts of talc are well pulverized and mixed to obtain a dust of each compound.

Formulation example 4

Twenty parts of each of the present compounds (1) to (12), 3 parts of sodium naphthalenesulfonate/formalin condensate and 75 parts of water are well pulverized and mixed, and 2 parts of methyl cellulose is added and mixed as a thickening agent to obtain a flowable formulation of each compound.

Test examples will be shown. The present compounds are shown by Compound No. in Table 1, and compounds used as a control are shown by Compound symbol in Table 2.

Table 2

Test example 1

The emulsifiable concentrates of the following test compounds obtained according to Formulation example 1 were each diluted with water to a concentration of 0.01 ppm. Thereafter, 100 ml of each dilute solution thus obtained was put in a 180-ml polyethylene cup, and 20 last instar larvae of common mosquito (*Culex pipiens pallens*) were liberated therein. The larvae were bred on a bait until emergence to obtain an emergence inhibitory ratio (two replications).

The results are shown in Table 3.

Table 3

Test compound	Emergence inhibitory ratio (%)
(1)	100
(3)	100
(7)	100

Test example 2

The emulsifiable concentrates of the following test compounds obtained according to Formulation example 1 were each diluted with water to a concentration of 50 ppm. Two milliliters of each dilute solution thus obtained was applied onto 13 g of artificial diet for tobacco cutworm (*Spodoptera litura*) which were then put in a polyethylene cup of 11 cm in diameter. Then, ten fourth instar larvae of tobacco cutworm were liberated in the cup. After six days, the dead and alive were examined to obtain mortality (two replications).

The results are shown in Table 4.

(3)	100
(4)	100
(5)	100
(8)	100
(12)	100
No treatment	5

Test example 3

The emulsifiable concentrates of the following test compounds obtained according to Formulation example 1 were each diluted with water to a pre-determined concentration to obtain a dilute solution of each emulsifiable concentrate. From 20 to 60 deutonymphs of carmine spider mite (*Tetranychus cinnabarinus*) were transferred onto leaves in a petri dish, and 3 ml of the dilute solution was sprayed thereon. After three days, the number of the adults was counted to obtain an adult emergence inhibitory ratio.

The results are shown in Table 5.

$$\text{Adult emergence inhibitory ratio (\%)} = \left(1 - \frac{\text{adult emergence ratio in the plot treated with chemicals}}{\text{adult emergence ratio in the plot treated with water}} \right) \times 100$$

Table 5

Test example 4

The emulsifiable concentrates of the following test compounds obtained according to Formulation example 1 were each diluted with water to a concentration of 100 ppm to obtain a dilute solution of each emulsifiable concentrate. Thirty female adults of carmine spider mite (*Tetranychus cinnabarinus*) were transferred onto a leaf in a petri dish, and 3 ml of the dilute solution was sprayed thereon. After air-drying, 18 female adults were transferred onto untreated leaves in a petri dish, and allowed to oviposit for three days. The eggs obtained were stored in a chamber controlled at 27° C in an artificial weather room. After six days, hatchability of the eggs was examined to obtain a sterilization ratio.

The results are shown in Table 6.

$$\text{Sterilization ratio (\%)} = \left(1 - \frac{\text{hatchability in the plot treated with chemicals}}{\text{hatchability in the plot treated with water}} \right) \times 100$$

Table 6

Test compound	Sterilization ratio (%)
(1)	98
(3)	95
(7)	86
(8)	96
(9)	100
(10)	99
(11)	93
(A)	0
(B)	0
(C)	0
(D)	0
(E)	0

20 Test example 5

Ten female adults of carmine spider mite (*Tetranychus cinnabarinus*) were transferred onto each leaf of potted kidney bean in a primary leaf stage, which had elapsed seven days after sowing, and stored in a constant-temperature room kept at 25 °C. After six days, the emulsifiable concentrate of the following test compounds formulated according to Formulation example 1 was diluted with water so that the active ingredient concentration was 500 ppm. Ten milliliters of the dilute solution was sprayed onto the plant on a turn table by a spray gun, and 2 ml of the diluted solution was treated on the pot soil. After 20 days, the degree of damage of each kidney bean by mites was examined.

The degree of damage was classified into three stages, -, + and ++.

- 30 - : Little damage is observed.
 + : Slight damage is observed.
 ++ : Same damage as in the untreated plot is observed.

The results are shown in Table 7.

Claims

1. A benzoylurea derivative represented by the formula,

5

10

15

wherein R_1 is a fluorine or hydrogen atom, R_2 is a chlorine or hydrogen atom, R_3 is a fluorine or bromine atom or a lower haloalkyl group, and X and Y, which may be the same or different, are an oxygen or sulfur atom.

2. The benzoylurea derivative according to Claim 1, wherein R_3 is a fluorine atom or a difluoromethyl group.

20

3. The benzoylurea derivative according to Claim 1 or 2 represented by the formula,

25

30

4. The benzoylurea derivative according to Claim 1 or 2 represented by the formula,

35

40

45

5. The benzoylurea derivative according to Claim 1 or 2 represented by the formula,

50

55

6. The benzoylurea derivative according to Claim 1 or 2 represented by the formula,

7. A method for producing a benzoylurea derivative represented by the formula,

wherein R_1 is a fluorine or hydrogen atom, R_2 is a chlorine or hydrogen atom, R_3 is a fluorine or bromine atom or a lower haloalkyl group, and X and Y, which may be the same or different, are an oxygen or sulfur atom, which comprises reacting a benzoylisocyanate or benzoylisothiocyanate compound represented by the formula,

wherein X is the same as described above, with a 4-anilinoaniline compound represented by the formula,

wherein R_1 , R_2 , R_3 and Y are the same as described above.

8. A method for producing a benzoylurea derivative represented by the formula,

wherein R₁ is a fluorine or hydrogen atom, R₂ is a chlorine or hydrogen atom, R₃ is a fluorine or bromine atom or a lower haloalkyl group, and X and Y, which may be the same or different, are an oxygen or sulfur atom, which comprises reacting 2,6-difluorobenzamide represented by the formula,

with an isocyanate or isothiocyanate compound represented by the formula,

wherein R₁, R₂, R₃, X and Y are the same as described above.

9. An insecticidal and/or acaricidal composition which comprises as an active ingredient an insecticidally and/or acaricidally effective amount of the compound according to Claim 1, and an inert carrier or diluent.
10. The composition according to Claim 9, wherein R₃ is a fluorine atom or a difluoromethyl group.
11. A method for controlling or exterminating insects and/or acarids which comprises applying as the active ingredient an insecticidally and/or acaricidally effective amount of the compound according to Claim 1 to the locus where insects and/or acarids propagate.
12. Use of the compound according to Claim 1 as an insecticide and/or acaricide.

13. A 4-anilinoaniline compound represented by the formula,

wherein R₁ is a fluorine or hydrogen atom, R₂ is a chlorine or hydrogen atom, R₃ is a fluorine or bromine atom or a lower haloalkyl group, and Y is an oxygen or sulfur atom.

15 **Revendications**

1. Dérivé de benzoylurée représenté par la formule

dans laquelle R₁ est un atome de fluor ou d'hydrogène, R₂ est un atome de chlore ou d'hydrogène, R₃ est un atome de fluor ou de brome ou un groupement haloalkyle inférieur, et X et Y qui peuvent être identiques ou différents sont des atomes d'oxygène ou de soufre.

2. Dérivé de benzoylurée selon la revendication 1, dans lequel R₃ est un atome de fluor ou un groupement difluorométhyle.

3. Dérivé de benzoylurée selon la revendication 1 ou 2, représenté par la formule

4. Dérivé de benzoylurée selon la revendication 1 ou 2, représenté par la formule

5. Dérivé de benzoylurée selon la revendication 1 ou 2, représenté par la formule

6. Dérivé de benzoylurée selon la revendication 1 ou 2, représenté par la formule

7. Procédé de production d'un dérivé de benzoylurée représenté par la formule

dans laquelle R_1 est un atome de fluor ou d'hydrogène, R_2 est un atome de chlore ou d'hydrogène, R_3 est un atome de fluor ou de brome ou un groupement haloalkyle inférieur, et X et Y qui peuvent être identiques ou différents sont des atomes d'oxygène ou de soufre, procédé qui consiste à faire réagir un dérivé de benzoylisocyanate ou de benzoylisothiocyanate représenté par la formule

dans laquelle X est tel que défini précédemment, avec une 4-anilinoaniline représentée par la formule

dans laquelle R₁, R₂, R₃ et Y sont tels que définis précédemment.

8. Procédé de production d'un dérivé de benzoylurée représenté par la formule

dans laquelle R₁ est un atome de fluor ou d'hydrogène, R₂ est un atome de chlore ou d'hydrogène, R₃ est un atome de fluor ou de brome ou un groupement haloalkyle inférieur, et X et Y qui peuvent être identiques ou différents sont des atomes d'oxygène ou de soufre, procédé qui consiste à faire réagir le 2,6-difluorobenzamide représenté par la formule

avec un dérivé de benzoylisocyanate ou de benzoylisothiocyanate représenté par la formule

dans laquelle R₁, R₂, R₃, X et Y sont tels que décrits précédemment.

9. Composition insecticide et/ou acaricide, qui contient comme ingrédient actif une quantité efficace sur le plan insecticide et/ou acaricide du dérivé selon la revendication 1, et un support ou diluant inerte.

10. Composition selon la revendication 9, dans laquelle R₃ est un atome de fluor ou un groupement difluorométhyle.

11. Procédé pour lutter contre les insectes et/ou les acariens ou pour les exterminer, qui consiste à appliquer, au lieu où se propagent les insectes et/ou les acariens, en tant qu'ingrédient actif une quantité efficace sur le plan insecticide et/ou acaricide du dérivé selon la revendication 1.

12. Utilisation du composé selon la revendication 1, en tant qu'insecticide et/ou acaricide.

13. 4-Anilinoaniline représentée par la formule

dans laquelle R_1 est un atome de fluor ou d'hydrogène, R_2 est un atome de chlore ou d'hydrogène, R_3 est un atome de fluor ou de brome ou un groupement haloalkyle inférieur et Y est un atome d'oxygène ou de soufre.

Patentansprüche

1. Ein Benzoylharnstoffderivat der Formel

in der R_1 ein Fluor- oder Wasserstoffatom, R_2 ein Chlor- oder Wasserstoffatom, R_3 ein Fluor- oder Bromatom oder eine niedere Halogenalkylgruppe ist und X und Y, die gleich oder unterschiedlich sein können, ein Sauerstoff- oder Schwefelatom sind.

2. Benzoylharnstoffderivat nach Anspruch 1, wobei R_3 ein Fluoratom oder eine Difluormethylgruppe ist.

3. Benzoylharnstoffderivat nach Anspruch 1 oder 2 der Formel

4. Benzoylharnstoffderivat nach Anspruch 1 oder 2 der Formel

5. Benzoylharnstoffderivat nach Anspruch 1 oder 2 der Formel

6. Benzoylharnstoffderivat nach Anspruch 1 oder 2 der Formel

7. Verfahren zur Herstellung eines Benzoylharnstoffderivats der Formel

in der R_1 ein Fluor- oder Wasserstoffatom, R_2 ein Chlor- oder Wasserstoffatom, R_3 ein Fluor- oder Bromatom oder eine niedere Halogenalkylgruppe ist und X und Y, die gleich oder unterschiedlich sein können, ein Sauerstoff- oder Schwefelatom sind, dadurch gekennzeichnet, daß man eine Benzoylisocyanat- oder Benzoylthiocyanat-Verbindung der Formel

5

10

in der X die vorstehende Bedeutung hat, mit einer 4-Anilinoanilin-Verbindung der Formel

15

20

in der R_1 , R_2 , R_3 und Y die vorstehende Bedeutung haben, umsetzt.

8. Verfahren zur Herstellung eines Benzoylharnstoffderivats der Formel

25

30

35

in der R_1 ein Fluor- oder Wasserstoffatom, R_2 ein Chlor- oder Wasserstoffatom, R_3 ein Fluor- oder Bromatom oder eine niedere Halogenalkylgruppe ist und X und Y, die gleich oder unterschiedlich sein können, ein Sauerstoff- oder ein Schwefelatom sind, dadurch gekennzeichnet, daß man 2,6-Difluorobenzamid der Formel

40

45

50

55

mit einer Isocyanat- oder Isothiocyanat-Verbindung der Formel

in der R₁, R₂, R₃, X und Y die vorstehende Bedeutung haben, umgesetzt.

9. Eine insektizide und/oder akarizide Zusammensetzung, die als aktiven Bestandteil eine insektizid- und/oder akarizid wirksame Menge der Verbindung nach Anspruch 1 sowie einen inerten Träger oder ein inertes Verdünnungsmittel enthält.
10. Zusammensetzung nach Anspruch 9, wobei R₃ ein Fluoratom oder eine Difluormethylgruppe ist.
11. Verfahren zur Bekämpfung oder Vernichtung von Insekten und/oder Milben, dadurch gekennzeichnet, daß man auf den Bereich, in dem Insekten und/oder Milben sich vermehren, als aktiven Bestandteil eine insektizid- und/oder akarizid wirksame Menge der Verbindung nach Anspruch 1 aufbringt.
12. Verwendung der Verbindung nach Anspruch 1 als Insektizid und/oder Akarizid.
13. 4-Anilinoanilinverbindung der Formel

in der R₁ ein Fluor- oder Wasserstoffatom, R₂ ein Chlor- oder Wasserstoffatom, R₃ ein Fluor- oder Bromatom oder eine niedere Halogenalkylgruppe und Y ein Sauerstoff- oder ein Schwefelatom ist.
